TRANSFORMAÇÃO EM ANIME:

1 – FAÇA O UPLOAD DA SUA IMAGEM NO GOOGLE GEMINI OU NO CHAT GPT

2 – SOLE O PROMPT ABAIXO E AGUARDE A IMAGEM SER GERADA.

Versão final:

Transform the referenced image into a premium cinematic Japanese anime film still while preserving the original composition with high fidelity. Keep the exact camera angle, framing, perspective, pose, character placement, body language, interaction, environment, location, object placement, and overall spatial layout from the reference image. Do not redesign the scene, change the story, or invent a new composition. Prioritize scene fidelity over stylization.

Reinterpret the image as if it were a beautifully hand-drawn frame from a high-budget modern Japanese animated feature film. All characters should appear in a refined anime style with natural facial proportions, expressive eyes, elegant linework, believable anatomy, softly stylized features, naturally flowing hair, detailed clothing folds, and subtle cinematic expressions. Preserve the original emotional tone, identity impression, posture, and interaction of each character.

Render the image with clean, confident line art, rich cinematic anime shading, soft tonal transitions, carefully painted highlights, subtle ambient occlusion, delicate rim lighting, realistic depth, and beautifully balanced color grading. Preserve the original architecture, landscape, props, interior details, lighting direction, and environmental structure, transforming every element into a polished hand-painted anime aesthetic with feature-film-quality painterly backgrounds and rich texture work.

If appropriate, add only subtle environmental motion such as gently flowing hair, slight fabric movement, soft drifting particles, delicate atmospheric haze, faint

light rays, or a light breeze. These effects must remain restrained, elegant, and cinematic, without changing the stillness or emotional reading of the original scene.

The final image must feel like an official still from a world-class Japanese animated feature film: elegant, immersive, emotionally cinematic, visually stunning, and hand-crafted. It must not look like a simple filter, a realistic photograph, a 3D render, CGI, a game cinematic, or a generic cartoon illustration.

No fight scene, no battle atmosphere, no violence, no destruction, no explosions, no speed lines, no impact effects, no combat smoke, no exaggerated action energy, no comedic distortion, and no scene rearrangement.
